1. Testing..... 2

2. Screenshots and Demo..... 5

1. Testing

1.1 Test Mandatory Enforcement

The Incident form was tested by setting the Impact field to High and leaving Assigned To empty.

Expected Result

- Assignment Group becomes mandatory.
- Urgency becomes read-only.
- Urgency is automatically set to High.
- Saving the Incident without Assigned To is prevented.

Screenshot

The screenshot shows the ServiceNow Incident form for a new record. The browser address bar indicates the URL: dev448325.service-now.com/now/nav/ui/classic/params/target/incident.do%3Fsys_id%3D... The form title is "Incident - Create INC0010016". The form is divided into two main sections: "Incident" and "Additional actions". The "Incident" section contains fields for Number (INC0010016), Caller (Adela Cervantsz), Category (Inquiry / Help), Subcategory (-- None --), Service, Service offering, Configuration item, Channel (-- None --), State (New), Impact (1 - High), Urgency (1 - High), Priority (1 - Critical), Assignment group (Software), and Assigned to. The "Additional actions" section contains a message: "Urgency set to High for High impact incidents." A red error message is displayed below the Assigned to field: "Assigned To is mandatory for High Impact Incidents." The form also includes a "Short description" field with the text "testing UI policy." and a "Description" field.

Figure 1: Testing mandatory enforcement for a High Impact Incident

1.2 Test Successful Save

The Assigned To field was filled with a valid user and the Incident was submitted.

Expected Result

The Incident is saved successfully without the validation error.

Screenshot

UI policy actions specify exactly what actions to take on a specified field. The conditions specified in the UI policy determine when these actions are triggered. [More Info](#)

UI policy: **High Impact Control**

1.3 Reverse Condition Test

The Impact field was changed from High to Medium.

Expected Result

- Assignment Group is no longer mandatory because of the UI Policy.
- Urgency becomes editable again.
- The Incident can be saved successfully.

1.4 Test List Edit Blocking

An attempt was made to change the State field directly from the Incident list.

Expected Result

An alert message is displayed and the State change is blocked.

1.5 Test Form-Based Update

The State field was changed directly from the Incident form.

Expected Result

The State change is saved successfully.

2. Screenshots and Demo

The project demonstration consists of screenshots showing the configuration and testing of the ServiceNow Incident controls. The screenshots included in this documentation demonstrate:

- UI Policy configuration
- UI Policy Actions
- Client Scripts
- High Impact behavior
- Mandatory field enforcement
- Successful Incident submission
- Reverse condition behavior
- List editing restriction
- Form-based State update

The complete project can be demonstrated using the configured ServiceNow Incident instance.
